

## ENHANCED SAFETY PROTOCOLS

The Drs and staff of NFD strive to provide the safest dental environment for you and your family. Our infection control protocols maximize your safety and that of our staff and community. Look at our Google reviews to see the level of comfort and confidence our patients feel. To summarize:

All patients:

1. Are screened upon entry for their recent health/travel histories, and temperature/pulse oximeter readings
2. Use hand sanitizer immediately upon entering
3. **Must wear a properly fitting mask before entering and during all non-treatment times**
4. Rinse for 30 seconds with Listerine before and after all treatment

### **Other administrative/environmental controls:**

1. Hygienists utilize high volume suction during treatment to minimize aerosols
2. State of the art air filtration and disinfection units were installed on our HVAC system
3. Three Surgically Clean Air Filters (endorsed by the Michigan Dental Association) were installed in 2019
4. Each operatory is disinfected twice with Cavi-Wipes between each patient
5. Clinical staff wear kn-95 masks, eye protection, face shields, and knee length clinic coats which are laundered on site

From your first steps into our office, you will see and feel the *elevated level of care* at Northville Family Dentistry.
